## **DETAILED ACTION**

### **Election/Restrictions**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Groups 1-31. Claims 1 and 3 (both in part), drawn to a method to identify an agent which modulates a Tissue necrosis Factor and Interferon influenced cellular process or response by determining the level of expression of one or more genes selected from the group consisting of SEQ ID NOS: 1-31, classified in class 435, subclasses 6 and 7.1.

2. This application contains 31 nucleic acid sequences (SEQ ID NOS: 1-31). Each individual sequence represents a structural and functionally distinct entity that is capable of supporting a separate patent. The search and consideration of more than a single sequence constitutes an undue search burden on the office, given the ever-increasing size of the database.

Applicant is advised that a reply to this requirement must include an identification of an amino acid sequence that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election. Arguments

Art Unit: 1646

that specific sequences should be rejoined due to structural and/or functional relationships will be given full consideration.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48 (b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48 (b) and by the fee required under 37 CFR 1.17 (I).
